## MINISYMPOSIUM 9: Subspace Correction Methods

Organizers: Ralf Hiptmair<sup>1</sup>, Ralf Kornhuber<sup>2</sup>, and Jinchao Xu<sup>3</sup>

<sup>1</sup> ETH Zürich, Switzerland. [hiptmair@sam.math.ethz.ch](mailto:hiptmair@sam.math.ethz.ch)

<sup>2</sup> Free University of Berlin, Germany. [kornhuber@math.fu-berlin.de](mailto:kornhuber@math.fu-berlin.de)

<sup>3</sup> Pennsylvania State University, USA. [xu@math.psu.edu](mailto:xu@math.psu.edu)

Subspace correction methods are well established as a unifying framework for multi-grid and domain decomposition. It also serves as a powerful tool both for the construction and the analysis of efficient iterative solvers for discretized partial differential equations. This minisymposium provides an overview on recent results in this field with special emphasis on linear and nonlinear systems.
