Contents

Part I Plenary Talks (PT)

A Short Note on Solving Partial Differential Equations Using Convolutional Neural Networks 3
Viktor Grimm, Alexander Heinlein, and Axel Klawonn

Optimized Robin Transmission Conditions for Anisotropic Diffusion on Arbitrary Meshes 15
Martin J. Gander, Laurence Halpern, Florence Hubert, and Stella Krell

Domain Decomposition Algorithms for Neural Network Approximation of Partial Differential Equations 27
Hyea Hyun Kim and Hee Jun Yang

Convergence Bounds for One-Dimensional ASH and RAS 39
Marcus Sarkis and Maksymilian Dryja

Part II Talks in Minisymposia

Weak Scalability of Domain Decomposition Methods for Discrete Fracture Networks 53
Stefano Berrone and Tommaso Vanzan

How Does the Partition of Unity Influence SORAS Preconditioner? 61
Marcella Bonazzoli, Xavier Claeys, Frédéric Nataf, and Pierre-Henri Tournier

Convergence of the Micro-Macro Parareal Method for a Linear Scale-Separated Ornstein-Uhlenbeck SDE 69
Ignace Bossuyt, Stefan Vandewalle, and Giovanni Samaey

A Trefftz-Like Coarse Space for the Two-Level Schwarz Method on Perforated Domains 77
Miranda Boutilier, Konstantin Brenner, and Victorita Dolean

On Global and Monotone Convergence of the Preconditioned Newton's Method for Some Mildly Nonlinear Systems 85
Konstantin Brenner

Optimized Schwarz Method in Time for Transport Control 93
Duc-Quang Bui, Bérangère Delourme, Laurence Halpern, and Felix Kwok

An Overlapping Preconditioner for 2D Virtual Problems Posed in H(rot) with Irregular Subdomains 101
Juan G. Calvo, César Herrera, and Filánder A. Sequeira

A Two-Level Restricted Additive Schwarz Method for Asynchronous Computations 109
Faycal Chaouqui and Daniel B. Szyld

Cross-Points in the Neumann-Neumann Method 117
Bastien Chaudet-Dumas and Martin J. Gander

A Preconditioner for Free-Surface Hydrodynamics BEM 125
Gabriele Ciaramella, Marco Gambarini, and Edie Miglio

A Performance Comparison of Classical Volume and New Substructured One- and Two-Level Schwarz Methods in PETSc 133
Gabriele Ciaramella, Martin J. Gander, Serge Van Criekingen, and Tommaso Vanzan

Semi-Discrete Analysis of a Simplified Air-Sea Coupling Problem with Nonlinear Coupling Conditions 141
Simon Clement, Florian Lemarié, and Eric Blayo

A Block Jacobi Sweeping Preconditioner for the Helmholtz Equation 149
Ruiyang Dai

Optimized Neumann-Neumann Method for the Stokes-Darcy Problem ... 157
Marco Discacciati and Jake Robinson

Finite Basis Physics-Informed Neural Networks as a Schwarz Domain Decomposition Method 165
Victorita Dolean, Alexander Heinlein, Siddhartha Mishra, and Ben Moseley

Multigrid Interpretation of a Three-Level Parareal Algorithm 173
Stephanie Friedhoff, Martin J. Gander, and Felix Kwok

Coupling Dispersive Shallow Water Models by Deriving Asymptotic Interface Operators 181
José Galaz, Maria Kazolea, and Antoine Rousseau

Piece-wise Constant, Linear and Oscillatory: a Historical Introduction to Spectral Coarse Spaces with Focus on Schwarz Methods 189
Martin J. Gander and Laurence Halpern

A New Nodal Integration Method for Helmholtz Problems Based on Domain Decomposition Techniques 199
Martin J. Gander and Niteen Kumar

Dirichlet-Neumann and Neumann-Neumann Methods for Elliptic Control Problems 207
Martin J. Gander and Liu-Di Lu

An Introduction to Heterogeneous Domain Decomposition Methods for Multi-Physics Problems 215
Martin J. Gander and Véronique Martin

Substructuring of Arbitrary Domain Decomposition Methods 223
Martin J. Gander and Frédéric Nataf

Spectral Q1**-Based Coarse Spaces for Schwarz Methods** 231
Martin J. Gander and Serge Van Criekingen

Optimized Schwarz Methods for Stokes-Darcy Flows: the Brinkman Equations 239
Martin J. Gander, Yiying Wang, and Yingxiang Xu

Parareal Algorithms for the Cahn-Hilliard Equation 247
Gobinda Garai and Bankim C. Mandal

A Parallel Space-Time Finite Element Method for the Simulation of an Electric Motor 255
Peter Gangl, Mario Gobrial, and Olaf Steinbach

Reynolds-Blended Weights for BDDC in Applications to Incompressible Flows 263
Martin Hanek, Jakub Šístek, and Marek Brandner

Neural Network Interface Condition Approximation in a Domain Decomposition Method Applied to Maxwell's Equations 271
Tobias Knoke, Sebastian Kinnewig, Sven Beuchler, and Thomas Wick

Learning Adaptive FETI-DP Constraints for Irregular Domain Decompositions 279
Axel Klawonn, Martin Lanser, and Janine Weber

Adaptive Three-Level BDDC Using Frugal Constraints 287
Axel Klawonn, Martin Lanser, and Janine Weber

Efficient Adaptive Elimination Strategies in Nonlinear FETI-DP Methods in Combination with Adaptive Spectral Coarse Spaces 295
Axel Klawonn and Martin Lanser

On the Use of Hybrid Coarse-Level Models in Multilevel Minimization Methods 303
Alena Kopaničáková

Nonlinear Schwarz Preconditioning for Quasi-Newton Methods 311
Hardik Kothari

Nonlinear Schwarz Preconditioning for Nonlinear Optimization Problems with Bound Constraints 319
Hardik Kothari, Alena Kopaničáková, and Rolf Krause

Domain Decomposition Solvers for Operators with Fractional Interface Perturbations 327
Miroslav Kuchta

Optimized Schwarz Methods for Isogeometric Analysis 335
Lahcen Laayouni, Ahmed Ratnani, and Abdessadek Rifqui

An Alternating Approach for Optimizing Transmission Conditions in Algebraic Schwarz Methods 343
Martin J. Gander, Lahcen Laayouni, and Daniel B. Szyld

FETI-DP Algorithms for 2D Biot Model with Discontinuous Galerkin Discretization 351
Pilhwa Lee

Linear, Super-Linear and Combined Fourier Heat Kernel Convergence Estimates for Schwarz Waveform Relaxation 359
Martin J. Gander and Véronique Martin

Cyclic and Chaotic Examples in Schwarz-Preconditioned Newton Methods 367
Conor McCoid and Martin J. Gander

Global-Local Forward Models within Bayesian Inversion for Large Strain Fracturing in Porous Media 375
Nima Noii, Thomas Wick, and Amirreza Khodadadian

On Algebraic Bounds for POSM and MRAS 383
Martin J. Gander and Michal Outrata

Hierarchical LU Preconditioning for the Time-Harmonic Maxwell Equations 391
Maryam Parvizi, Amirreza Khodadadian, Sven Beuchler, and Thomas Wick

Convergence Bounds for Parareal with Spatial Coarsening 401
Aušra Pogoželskytė and Martin J. Gander

Three-Level NOSAS Preconditioners 409
Yi Yu and Marcus Sarkis

Optimized Schwarz Method for Coupled Direct-Adjoint Problems Applied to Parameter Identification in Advection-Diffusion Equation 417
Alexandre Vieira and Pierre-Henri Cocquet

Three-Level BDDC for Virtual Elements 427
Axel Klawonn, Martin Lanser, and Adam Wasiak

An Adaptive Overlapping Schwarz Algorithm for Isogeometric Analysis . . 435
Olof B. Widlund, Luca F. Pavarino, Simone Scacchi, and Stefano Zampini

Part III Contributed Talks

Numerical Assessment of PML Transmission Conditions in a Domain Decomposition Method for the Helmholtz Equation 445
Niall Bootland, Sahar Borzooei, Victorita Dolean, and Pierre-Henri Tournier

Unmapped Tent Pitching Schemes by Waveform Relaxation 455
Gabriele Ciaramella, Martin J. Gander, and Ilario Mazzieri

A 2-Level Domain Decomposition Preconditioner for KKT Systems with Heat-Equation Constraints 463
Eric C. Cyr

Auxiliary Space Preconditioning with a Symmetric Gauss-Seidel Smoothing Scheme for IsoGeometric Discretization of $\mathbf{H}_0(\mathbf{curl})$-elliptic Problem 471
Abdeladim El Akri, Khalide Jbilou, Nouredine Ouhaddou, and Ahmed Ratnani

Composing Two Different Nonlinear FETI–DP Methods 479
Stephan Köhler and Oliver Rheinbach

Biot Model with Generalized Eigenvalue Problems for Scalability and Robustness to Parameters 487
Pilhwa Lee

Adaptive Schwarz Method for a Non-Conforming Crouzeix-Raviart Discretization of a Multiscale Elliptic Problem 495
Leszek Marcinkowski and Talal Rahman

A Variational-Based Multirate Time-Integrator for FETI and Structural Dynamics: Lagrange-Multiplier with Micro-Discretization 503
Andreas S. Seibold and Daniel J. Rixen

Accelerated Convergence of the Pipelined Dynamic Iteration Method for RLC Circuits 511
Hélèna Shourick, Damien Tromeur-Dervout, and Laurent Chédot

GPU Optimizations for the Hierarchical Poincaré-Steklov Scheme 519
Anna Yesypenko and Per-Gunnar Martinsson
