## Part I Plenary Talks

<b>On the Unmapped Tent Pitching for the Heterogeneous Wave Equation . . . . .</b>	<b>3</b>
Marcella Bonazzoli, Gabriele Ciaramella, Ilario Mazzieri	
<b>A Non-Iterative Domain Decomposition Time Integrator Combined with Discontinuous Galerkin Space Discretizations for Acoustic Wave Equations . . . . .</b>	<b>15</b>
Tim Buchholz, Marlis Hochbruck	
<b>Balancing Inexactness in Mixed Precision Matrix Computations . . . . .</b>	<b>27</b>
Erin Claire Carson	
<b>Fast Boundary Element Methods Beyond Homogeneous Media: Challenges Towards Realistic Wave Propagation Simulations . . . . .</b>	<b>39</b>
Stéphanie Chaillat	
<b>Milestoning: Domain Decomposition for Molecular Dynamics . . . . .</b>	<b>51</b>
Ziheng Chen, Björn Engquist, Laurence Halpern	
<b>Overview of overlapping Schwarz methods in PETSc . . . . .</b>	<b>63</b>
Pierre Jolivet, Jordi Manyer, Raphaël Zanella	
<b>Domain Decomposition and Beyond . . . . .</b>	<b>75</b>
Jan Mandel	
<b>Multi-Preconditioned LBFGS for Training Finite-Basis PINNs . . . . .</b>	<b>87</b>
Marc Salvadó-Benasco, Aymane Kssim, Alexander Heinlein, Rolf Krause, Serge Gratton, Alena Kopaničáková	

<b>Do <i>You</i> Precondition on the Left or on the Right?</b> .....	99
Nicole Spillane, Pierre Matalon, Daniel B. Szyld	

## Part II Minisymposia and Contributed Talks

<b>FEM-Based A-Optimal Sensor Placement for Heat Source Inversion From Final Time Measurement</b> .....	113
Christian Aarset, Tram Thi Ngoc Nguyen	

<b>Adaptive BDDC Preconditioning for Unstructured Bidomain Discretizations</b> .....	121
Talaat Abdelhamid, Ngoc Mai Monica Huynh, Stefano Zampini, Rongliang Chen, Luca F. Pavarino, Simone Scacchi	

<b>Coarse Spaces for Virtual Element Methods on Irregular 3D Subdomain Decompositions</b> .....	129
Ana Aguilar-Pineda, Luis F. Amey, Adrián Angulo-Paniagua, Juan G. Calvo	

<b>Multiscale Spectral Generalized Finite Element Methods for Discontinuous Galerkin Schemes</b> .....	137
Christian Alber, Lukas Holbach	

<b>A Non-Monotone Preconditioned Trust-Region Method for Neural Network Training</b> .....	145
Andrea Angino, Bindi Çapriqi, Shega Likaj, Ken Trotti, Rolf Krause	

<b>Trust-Region Methods with Low-Fidelity Objective Models</b> .....	153
Andrea Angino, Matteo Aurina, Alena Kopaničáková, Matthias Voigt, Marco Donatelli, Rolf Krause	

<b>The Reduced Basis Multigrid Scheme for the Virtual Element Method</b> . . . .	161
Paola F. Antonietti, Silvia Bertoluzza, Fabio Credali	

<b>Numerical Verification of PolyDG Algebraic Solvers for the Pseudo-Stress Stokes Problem</b> .....	169
Paola F. Antonietti, Alessandra Cancrini, Gabriele Ciaramella	

<b>Discrete-Time Analysis of Optimized Schwarz Waveform Relaxation Taking into Account Initial Robin Values on the Interface</b> .....	177
Arthur Arnoult, Caroline Japhet, Pascal Omnes	

<b>Uzawa Algorithm for Nonhomogeneous Navier-Stokes Type Problems</b> . . . .	185
Lori Badea	

<b>A GenEO-Type Coarse Space with Smaller Eigenproblems</b> . . . . .	193
Peter Bastian, Nils Friess	
<b>ParaFlow: Parareal Acceleration of Gradient-Flow Minimization</b> . . . . .	201
Paolo Bellezza, Gabriele Ciaramella, Camilla Macchini, Ilario Mazziari, Marco Verani	
<b>Towards a Parallel Schwarz Solver Framework for Virtual Elements Using GDSW Coarse Spaces</b> . . . . .	209
Tommaso Bevilacqua, Axel Klawonn, Martin Lanser, Adam Wasiak	
<b>Spurious Resonances for Substructured FEM-BEM Coupling</b> . . . . .	217
Antonin Boisneault, Marcella Bonazzoli, Xavier Claeys, Pierre Marchand	
<b>On the Equivalence of Left and Right Nonlinear Preconditioning for a Class of Algebraic Systems</b> . . . . .	225
Konstantin Brenner, Alessandra Marelli, Quang Huy Tran	
<b>Multiscale and Domain Decomposition Methods for Linear and Nonlinear Fracture Network Flows</b> . . . . .	233
Konstantin Brenner, Géraldine Pichot, Daniel Zegarra Vasquez	
<b>Energy Estimate of a Discrete Duality Finite Volume scheme for a Phase-Field Model with Surfactants</b> . . . . .	241
Margherita Castellano, Ludovic Goudenège, Flore Nabet	
<b>GDSW Preconditioners for the EMI Model in Cardiac Electrophysiology</b> . . . . .	249
Edoardo Centofanti, Ngoc Mai Monica Huynh, Luca F. Pavarino, Simone Scacchi	
<b>Domain Decomposition for Integral Equations: Schwarz, Methods of Reflections and Elasticity</b> . . . . .	257
Stéphanie Chaillat, Marion Darbas, Martin J. Gander, Laurence Halpern	
<b>A Sweeping Domain Decomposition Method for Elliptic Problems</b> . . . . .	265
Bastien Chaudet-Dumas, Martin J. Gander	
<b>Minimizing the Convergence Factor of a Heterogeneous Space-Time Domain Decomposition Method</b> . . . . .	273
Franz Chouly, Martin J. Gander, Véronique Martin	
<b>Algebraic and Two-Level Parallel Substructured Schwarz Methods</b> . . . . .	281
Gabriele Ciaramella, Martin J. Gander, Serge Van Criekingen, Tommaso Vanzan	
<b>On the Uniform Convergence Analysis of the Schwarz Alternating Method for Optimal Control Problems</b> . . . . .	289
Gabriele Ciaramella, Wei Gong, Felix Kwok, Zhiyu Tan	

<b>Optimized Schwarz Waveform Relaxation for the Damped Wave Equation</b> .....	297
Gerardo Cicalese, Gabriele Ciaramella, Ilario Mazzieri, Martin J. Gander	
<b>From PDEs Constrained Optimization to Controllability Problems Via Time Domain Decomposition</b> .....	305
Pierre-Henri Cocquet, Liu-Di Lu	
<b>Two-Level Additive Schwarz Preconditioners for Reduced Integration Methods</b> .....	313
Filipe Cumaru, Alexander Heinlein, Joachim Schöberl	
<b>Neural Network-Driven Domain Decomposition for Efficient Solutions to the Helmholtz Equation</b> .....	321
Victorita Dolean, Daria Hrebenshchikova, Stéphane Lanteri, Victor Michel-Dansac	
<b>Preconditioning of GMRES for Helmholtz problems with quasimodes</b> . . . .	329
Victorita Dolean, Pierre Marchand, Axel Modave, Timothée Raynaud	
<b>Parareal for Hyperbolic Problems Just Does not Work - Or Does it?</b> .....	337
Martin J. Gander	
<b>Convergence of Overlapping Schwarz within the Finite Volume Framework</b> .....	345
Martin J. Gander, Laurence Halpern, Florence Hubert, Stella Krell	
<b>Hierarchical Coarse Basis by Randomised SVD: the Helmholtz Problem</b> . .	353
Martin J. Gander, Yao-Lin Jiang, Hui Zhang	
<b>A Domain Decomposition Inspired 2D nodal integration method for Helmholtz problems leading to well conditioned matrix problems</b> .....	361
Martin J. Gander, Niteen Kumar	
<b>Schwarz Modulus Based Matrix Splittings with Minimal Polynomial Extrapolation Acceleration for Linear Complementarity Problems Arising from American Option Pricing</b> .....	369
Martin J. Gander, Si-Wei Liao, Liu-Di Lu	
<b>A New Discrete Optimization of the Damping Parameter in Space-Time Multigrid with Block Jacobi Relaxation for the Heat Equation</b> .....	377
Martin J. Gander, Aušra Pogoželskytė	
<b>Parareal as a Runge-Kutta Scheme</b> .....	385
Martin J. Gander, Aušra Pogoželskytė	

<b>Similarities and Differences when Solving Helmholtz Problems with Schwarz Domain Decomposition and Multigrid</b> .....	393
Martin J. Gander, Yafei Sun	
<b>Manifold Parareal—A Parareal Algorithm For Gradient Flow</b> .....	401
Martin J. Gander, Yafei Sun, Yingxiang Xu	
<b>Two-level Schwarz Methods using more Subdomains than MPI Processes: Time and Energy Investigations</b> .....	409
Martin J. Gander, Serge Van Criekingen	
<b>Optimised Compact High Order Schemes for the Helmholtz Equation by Interpolation with Polynomials and Plane Waves</b> .....	417
Martin J. Gander, Hui Zhang, Ren Zhao	
<b>A New Hierarchical Domain Decomposition Method with Coarse Correction</b> .....	425
Martin J. Gander, Hui Zhang	
<b>Exploring Different Domain Decomposition Approaches for Enhanced Modelling of Real-Life Applications in Lakes</b> .....	433
Menno Genseberger, Mart Borsboom	
<b>Error Estimates for the Approximate Component Mode Synthesis Method in the Presence of Discontinuous Parameters Across the Interface</b> .....	441
Elena Giammatteo, Matthias Schlottbom	
<b>Learning Axial Green Surrogates for Elliptic Problems with Variable Coefficients</b> .....	449
Taeyoung Ha, Junhong Jo, Chang-Ock Lee	
<b>Odd Discrete Fourier Transforms for the Analysis of Schwarz Domain Decomposition Methods Discretized with Finite Volume Schemes</b> .....	457
Laurence Halpern, Martin Gander, Florence Hubert, Stella Krell	
<b>Performance of Waveform Relaxation with Adaptive Pipelining on the Wave Equation</b> .....	465
Laurence Halpern, Felix Kwok	
<b>Analysis of Two-Level Schwarz Preconditioners for Space-Time Discontinuous Galerkin Method</b> .....	473
Tomáš Hammerbauer, Vít Dolejší	

<b>Schwarz and Dirichlet–Neumann Waveform Relaxation for a Stefan Problem</b> .....	481
Ronald D. Haynes, Martin J. Gander	
<b>Domain Decomposition Architectures and Gauss–Newton Training for Physics-Informed Neural Networks</b> .....	489
Alexander Heinlein, Taniya Kapoor	
<b>Numerical Simulations Based on the Mie Scattering Theory for the Time-Harmonic Maxwell’s Equations</b> .....	497
Alexander Heinlein, Sebastian Kinnewig, Thomas Wick	
<b>Paving the Way to a T-Coercive Method for the Wave Equation</b> .....	505
Daniel Hoonhout, Richard Löscher, Carolina Urzúa-Torres	
<b>Iterative Algorithms for Partitioned Neural Network Approximation with the Robin Interface Condition</b> .....	513
Young Jae Jeon, Hyea Hyun Kim	
<b>Goal-Oriented Error Control and Mesh Adaptivity for Stationary Fluid-Structure Interaction Using a deal.II-FROSch Implementation</b> ....	521
Sebastian Kinnewig, Thibaut Klenke, Thomas Wick	
<b>Preconditioning a Fluid–Structure Interaction Problem Using Monolithic and Block Domain Decomposition Methods for the Fluid</b> .....	529
Axel Klawonn, Jascha Knepper, Lea Saßmannshausen	
<b>Combining Domain Decomposition and Multigrid Methods: A scalable interface between FROSch and FEAT</b> .....	537
Stephan Köhler, Oliver Rheinbach	
<b>Numerical Solution of Elliptic Distributed Optimal Control Problems with Boundary Value Tracking</b> .....	545
Ulrich Langer, Richard Löscher, Olaf Steinbach, Huidong Yang	
<b>A Massively Parallel Non-overlapping Schwarz Preconditioner for PolyDG Methods in Brain Electrophysiology</b> .....	553
Caterina B. Leimer Saglio, Stefano Pagani, Paola F. Antonietti	
<b>Toward a Damping-Robust Optimized Schwarz Waveform Relaxation Method for the Kelvin–Voigt Viscoelastic Wave Equation</b> .....	561
Fu Li, Yingxiang Xu	
<b>Centerline-Based Partition of Unity Coarse Space for Hemodynamic Simulations</b> .....	569
Yingzhi Liu, Fenfen Qi, Xiao-Chuan Cai	

<b>The Algebraic Multi-Grid-Barrier Method for Solving <math>p</math>-Laplace and Other Convex Optimization Problems</b> .....	577
Sébastien Loisel	
<b>Towards a Multigrid Preconditioner Interpretation of Hierarchical Poincaré-Steklov Solvers</b> .....	585
José Pablo Lucero Lorca	
<b>A DDFV-Based Approach for Solving the Oblique Derivative Boundary Value Problems in Geodesy</b> .....	593
Marek Macák, Karol Mikula, Zuzana Minarechová	
<b>Tree-Cotree-Based IETI-DP for Eddy Current Problems in Time-Domain</b> .....	601
Mario Mally, Rafael Vázquez, Sebastian Schöps	
<b>GPU-Accelerated FGMRES with Overlapping Schwarz Preconditioner for Efficient Solution of Helmholtz Equations</b> .....	609
Ziya Mammadov, Eero Vainikko	
<b>Graded Mesh in Optimal Control of Subdiffusive Models and its Significance in Neumann-Neumann Waveform Relaxation Algorithm</b> .....	617
Bankim C. Mandal, Soura Sana	
<b>Dirichlet-Neumann Waveform Relaxation Method with Multiple Subdomains for Reaction-Diffusion Equation with a Time Delay</b> .....	625
Bankim C. Mandal, Deeksha Tomer	
<b>Schwarz Domain Decomposition for the Convected Helmholtz Equation: Analysis of Transmission Conditions</b> .....	633
Philippe Marchner	
<b>Robustness of the Sutherland-Hodgman Algorithm</b> .....	641
Conor McCoid	
<b>Towards Modular Hierarchical Poincaré-Steklov Solvers</b> .....	649
Michal Outrata, José Pablo Lucero Lorca	
<b>Characterizations of the Augmented Lagrangian Method for Convex Variational Problems</b> .....	657
Jongho Park	
<b>Coarse Spaces Using Extended Generalized Eigenproblems for Heterogeneous Helmholtz Problems</b> .....	665
Emile Parolin, Frédéric Nataf	

<b>A Field-Based Characteristic Coarse Space for Simulating Kidney Hemodynamics</b> .....	673
Fenfen Qi, Yingzhi Liu, Rongliang Chen, Xiao-Chuan Cai	
<b>On the choice of parameters in a Loosely-Coupled Dirichlet-Neumann scheme for Fluid-Structure Interaction</b> .....	681
Francesca Renzi, Christian Vergara	
<b>FETI Method for Frequency-Domain Structural Dynamic Analyses Involving Localized Nonlinearities</b> .....	689
Andrea Saponaro, Giuseppe Battiato, Christian M. Frittone	
<b>Application of a Hierarchical Tensor Decomposition to the Dynamics of a Post-Pumping Saltwater Intrusion Experiment</b> .....	697
Benedikt Schröter, Julian Hilbert, Arne Nägel	
<b>Analysis of Bulk Interface Conditions for Atmosphere-Ice-Ocean Coupling</b> .....	705
Valentina Schüller, Philipp Birken, Hanna Kjellson	
<b>Sharpened PCG Iteration Bound for High-Contrast Heterogeneous Scalar Elliptic PDEs</b> .....	713
Philip Soliman, Filipe Cumarú, Alexander Heinlein	
<b>Inexact Gauss-Seidel Coarse Solvers for AMG and s-step CG</b> .....	721
Stephen Thomas, Pasqua D'Ambra	
<b>Adaptive Multidimensional Quadrature on Multi-GPU Systems</b> .....	729
Melanie Tonarelli, Simone Riva, Pietro Benedusi, Fabrizio Ferrandi, Rolf Krause	
<b>A Novel Domain Splitting Strategy for PDEs</b> .....	737
Ken Trotti	
<b>Massively Parallel Schwarz Methods for the High Frequency Helmholtz Equation</b> .....	745
Yan Xie, Shihua Gong, Ivan G. Graham, Euan A. Spence, Chen-Song Zhang	
<b>A Note on the Space-Time Variational Formulation for the Wave Equation with Source Term in <math>L^2(Q)</math></b> .....	753
Marco Zank	
<b>Right Nonlinear Preconditioning for the Backward-Facing Step Flow</b> .....	761
Jinfeng Zhang, Lulu Liu, David E. Keyes
